Citicus introduces asset risk triage capability

The latest version of the **Citicus ONE** risk and compliance management tool provides a unique capability to triage information systems and other assets, enabling users to specify and prioritize further risk management activities.

The triage approach builds on **Citicus ONE**'s popular method of assessing criticality of assets and combines this with user-specified parameters to assign assets to different triage levels. The assigned triage level can then be used by **Citicus ONE** to automate the risk management disciplines and actions appropriate for each asset.

This major new feature adds to other governance, risk and compliance capabilities recently introduced by Citicus into its award-winning software, including:

- Extensive e-mail-integrated workflow capabilities automating key parts of the risk management lifecycle

- Interactive risk and compliance reports providing decision makers at all levels with the information and metrics they need to manage risk down

- A user interface that slashes the learning curve for new and infrequent participants in the risk and compliance management process

- New specialized control standards including PCI-DSS V3.0, COBIT 5, ISO27001:2013 and the Information Security Forum Standard of Good Practice 2013.

The new capabilities are also available in Citicus' software for risk management of industrial control systems physical sites, suppliers and other asset classes.

Sian Alcock, Director responsible for software delivery at Citicus says,

"Our new software release delivers capabilities that are hot buttons for our customers. Efficiency of the risk management process is always an important issue, but particularly so in time of severe resource constraints. The ability of **Citicus ONE** *to help organizations prioritize activities in line with objective assessment of risk is a major contribution to reducing the increasing costs of compliance and risk initiatives."*

About Citicus

Citicus Limited has been providing world-class automated risk management tools since 2000. Its flagship software – **Citicus ONE** - has been implemented in public and private sector enterprises of all sizes around the world. Citicus also provides training and consulting services to help customers implement their governance, risk and compliance initiatives successfully.
